KEY VERIFIED RESULTS
- Study area: Ukhiya and Teknaf; total 573.07 km2
- Sentinel-2A January 2017; Sentinel-2B January 2021
- Samples: 800 (train 640 / test 160); WV-2 0.5 m + field
- Classes: Agriculture, Forest, Settlement, Water
- ANN 1000 iterations; OA/Kappa 0.97/0.96 (2017), 0.91/0.89 (2021)
- Forest: 249.82 -> 194.94 km2 (-54.88; -9.58 pp)
- Settlement: 156.14 -> 203.39 km2 (+47.25; +8.25 pp)
- Total ESV: US$310.13m -> US$332.94m (+22.81m)
- Forest ESV -US$17.22m (-21.97%); Settlement ESV +30.26%
- Raw materials -13.58%; Biodiversity -14.57%
- Settlement coeff ~6661 vs forest ~3135 (drives aggregate ESV up)
- CS sensitivity: all inelastic (CS < 1)

CROSS-PAPER NOTE vs P011 (2023b): closely related LULC outcomes but
materially different ESV totals/coefficients; do not merge or average.
