KEY VERIFIED RESULTS

- Camp-core AOI ~24 km²; prediction domain: Ukhiya+Teknaf upazilas
- Landsat dates (Jan): 1997-01-19 ... 2022-01-08 (8 scenes)
- Iso-cluster LULC: Water, Settlement, Barren, Vegetation (broad)
- Camp settlement 5.28% (1997) -> 11.91% (2017) -> 70.09% (2022)
- Camp vegetation 70.26% -> 52.88% -> 9.73%
- Mean Jan LST 18.86C -> 21.31C -> 25.94C
- 2022 LULC validation: OA ~92%, Kappa 0.89 (60 GE points)
- CA-ANN/MOLUSCE: 2018+2020 -> 2022; predict 2028 (iter3), 2034 (iter6)
- Upazila settlement 5.77% (2018), 4.97% (2022), 11.63% (2034)
- Upazila vegetation 56.80% (2022) -> 54.42% (2034); ~14 km² loss
- NDVI-LST reported 0.8825 = R² (mislabelled as correlation)
