KEY VERIFIED RESULTS

- AOI: 40x40 km; zones: camp ~2 km; 0-5; 5-10; 10-15 km buffers
- Camp lifecycle: opened 2016; peak 2017 (>50k); closed Dec 2021; 2022 post
- Annual RF maps 2016-2022; S1 quarterly VV/VH + multi-date S2
- OA 83.46% (2020 annual); 82% (July 2022 single image)
- Artificial surfaces +>26 pp in 2017; >20% near-camp transformed 2016-21
- Tree-cover conversion ~6% of AOI 2016-21; strongest within ~2-10 km
- Fuelwood: permitted ~4 km; later walks 10-12 km (interviews)
- 2022: managed woody vegetation; ~80% camp natural/managed veg classes
- Post-closure natural veg increase ~50% camp / ~15% nearest zone
